TPS■STAR Workflow Suite — Detailed Reference

Comprehensive overview of all GitHub Actions automations

1. Maintenance & Integrity
- basic.yml — runs linting, syntax, theme structure checks.
- basic-check.yml — validates YAML, Liquid, and JSON formatting.
- restore-metrics.yml — restores GA4 data from previous run archives.

2. Analytics & Reporting
- audit-trackers.yml — audits daily tracker performance.
- metrics.yml — central pipeline collecting GA4 metrics.
- run-ga4-report.yml — compiles GA4 data into summary format.
- weekly-analytics-report.yml — prepares Monday reports.
- send-report.yml — pushes reports to Slack / Notion.

3. Release & Deployment
- sentry-release.yml — tags releases for Sentry monitoring.
- theme.yml — deploys Shopify theme updates safely.

4. Backups & Fallbacks
- audit-trackers.yml.backup — manual trigger job for archiving metrics.
